Recent policy work done on Auto-Sector

Key Policy Studies Contributing to Evidence

- Regional Study on the Auto Sector, IDEAS
 - Faisal Bari, Nazish Afraz, Nadia Mukhtar, Usman Khan, Turab Hussain
- Engagement with Punjab under CPEC: Proposed framework; IGC
 - Nazish Afraz, Hassan Khawar, Ijaz Nabi
- Policy Reforms for Punjab's Priority Business Sectors, BERF
 - Usman Khan, Nazish Afraz & Hina Sheikh
- Assessment of the Lahore Auto & Auto-parts Cluster
 - Cluster Development Initiatives, GoPunjab and UNIDO

Sector Highlights

Contribution by the sector to the National Economy

- 16% of the national manufacturing sector
 - US\$ 6Bn per annum in Value
- Direct employment of over 200,000
- Over two million annual production
 - 88% are two wheelers
- Auto parts enjoy a derived demand
 - Over 2,000 manufacturers specializing in range of production technologies
 - Exports of over US\$15 million, potential

Lahore Production Capacity Installed

Honda Atlas: 40,000 U Millat Tractors: 60,000 U

3-2-wheeler OEMs

3-wheeler: 74,000 U 2-wheeler: 2,080,000 U

Under Evaluation / Planning

Hyundai Nishat, Renault, BAIC

Karachi Production Capacity Installed

4-wheeler OEMs

Gandhara Nissan Ltd., Master Motors Mitsubishi, Indus Motor Toyota, Pak Suzuki

Under Evaluation / Planning

VW Commercial, AUDI

SWOT of the Auto & Auto-parts Sector (Lahore cluster)

- Strong 2-wheeler industry
- Lower labour cost than in China*
- Strategic geographical position on the new silk road between east Asia and the Arabian Sea (CPEC)
- Strong government focus on automotive cluster development

- Growing population and growing market
- Despite image problems, Pakistan/ Lahore are on the right way to attract direct investment:
- Planning-phase: Hyundai, BAIC
- Potentially: Renault, VW, Audi
- Using competence in low to medium volumes as USP for export
- Create visibility for local competence
- Example: "Small green goods mover designed and manufactured in Lahore"

- Auto parts suppliers focus on manufacturing assigned parts
- No active role in increasing local content
- Competence gap in reverse engineering limiting local content growth
- Challenging process for importing raw-materials
- Low competency manufacturing: Low value added and cost pressure
- Protective industry policy model is not conducive for the growth of automotive sector

- Volatile market conditions
- Local supplier's potential at risk due to international competitors and international standards
- Not creating a balance between Mexican Vs Brazilian model¹

Factors that make Auto Sector a Promising Opportunity

- Production in automotive is organized in Global Value Chains
 - Lighter and more expensive parts sourced from competitive locations
 - Heavier parts sourced from locations closer to assembly lines
- Geographic proximity with China large automotive manufacturer
 - Significant investment in technology and R&D, domestic demand on rise
 - FTA-2; in 313 product lines over \$20 billion in imports of auto-parts
- CPEC infrastructure offers connectivity to large Chinese market
- Auto parts from Pakistan already being exported to developed markets
- Large technology and employment (E.g. motorbikes) spillover impacts

4-Dimensional Analysis

1. Economic Benefit

- Domestic demand of vehicles increasing (long-term trend)
- Investors coming in post incentives offered in New Auto Policy 2016-21
- Exports of auto parts can increase
- Pakistan can potentially manufacture for Chinese GVCs
- New entrants likely to increase competition
- Potential JVs to enhance integration opportunities

4-Dimensional Analysis

2. Social Inclusiveness

- Over 0.5 million direct and indirect employment
- Globally, auto sector has the second highest employment multipliers
- Current Human Capital suited for Tier 2/3 Firms

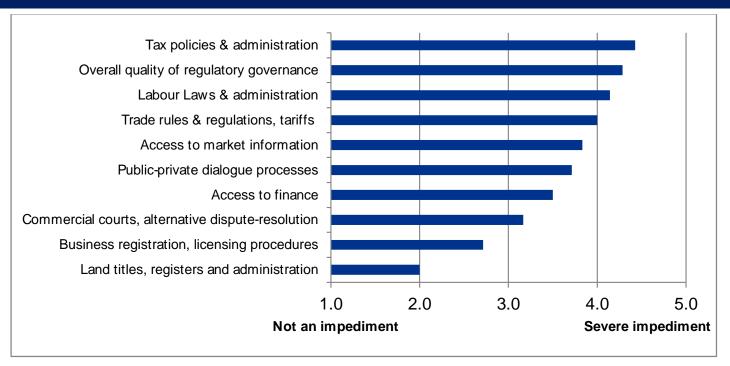

3. Innovation

- Pakistan is still at basic level, globally one of the most innovative
- China GVC offers significant opportunities

4. Environmental Sustainability

- Generally considered a clean manufacturing process
- Environmental impact in use varies, Pakistan has no national standards
- Manufacturers usually follow international standards

Business Environment Issues

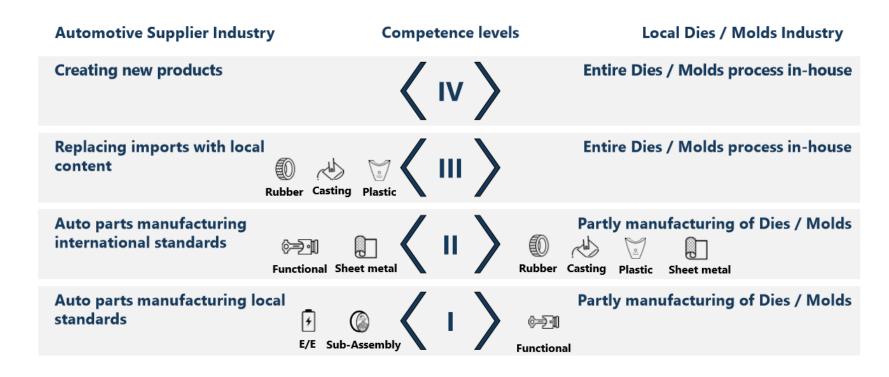

Source: Field data collected for BERF Report (Auto-part manufacturers based in Lahore)

Focusing on D/M Capacity is the Key

Today's Dies / Molds competence mainly in level I and II

Further localization of Auto parts will require Dies / Molds competence level III

Product innovation in Auto parts will require Dies / Molds competence level IV

Policy Prescriptions

Policy Outcomes

- Facilitate manufacturing to gain from Pak-China FTA
- Whole VC of D/M must be supported at the cluster level
- Explore JVs and market access under CPEC to integrate with China's GVC
- Increase emphasis on human capital development
 - Upgrade higher education and TVET
 - Provide incentives and institutions that support R&D
- Incentivize technology acquisition for innovation, especially with China
- Consistent and long-term taxation policy Monitoring of policy incentives
- Current Auto Policy offers no incentives for R&D and Technology Acq.
 - Advocate for revision incentivize innovation

Policy Outcomes

- Need for phased national auto standards and a regulatory body
 - To upgrade quality and ensure access to competitive markets
- Regulatory framework required for periodic assessment of competition
 - To avoid monopolistic behaviors
- Public-private dialogue needs to be strengthened, more inclusive
- Government should support access to information
 - Markets, technology and partnerships
- Explore possibilities of outward investments in Motorbikes & Tractors
- Enhancing credit to SMEs

Thank you
