Estimation of Export Potential for Pakistan

Fayyaz Hussain
Economist

SBP IGC Seminar on " Firms and Growth"
January 13, 2020, LRC SBP, Karachi

Pakistan's share in global exports is on decline

Percentage Share in Global Exports

Percentage Share in Global Exports

Miscellaneous manufactured articles	28.6	26.0	25.3	29.5	11.7	11.0	11.1	11.8

Methodology: Demand and Supply

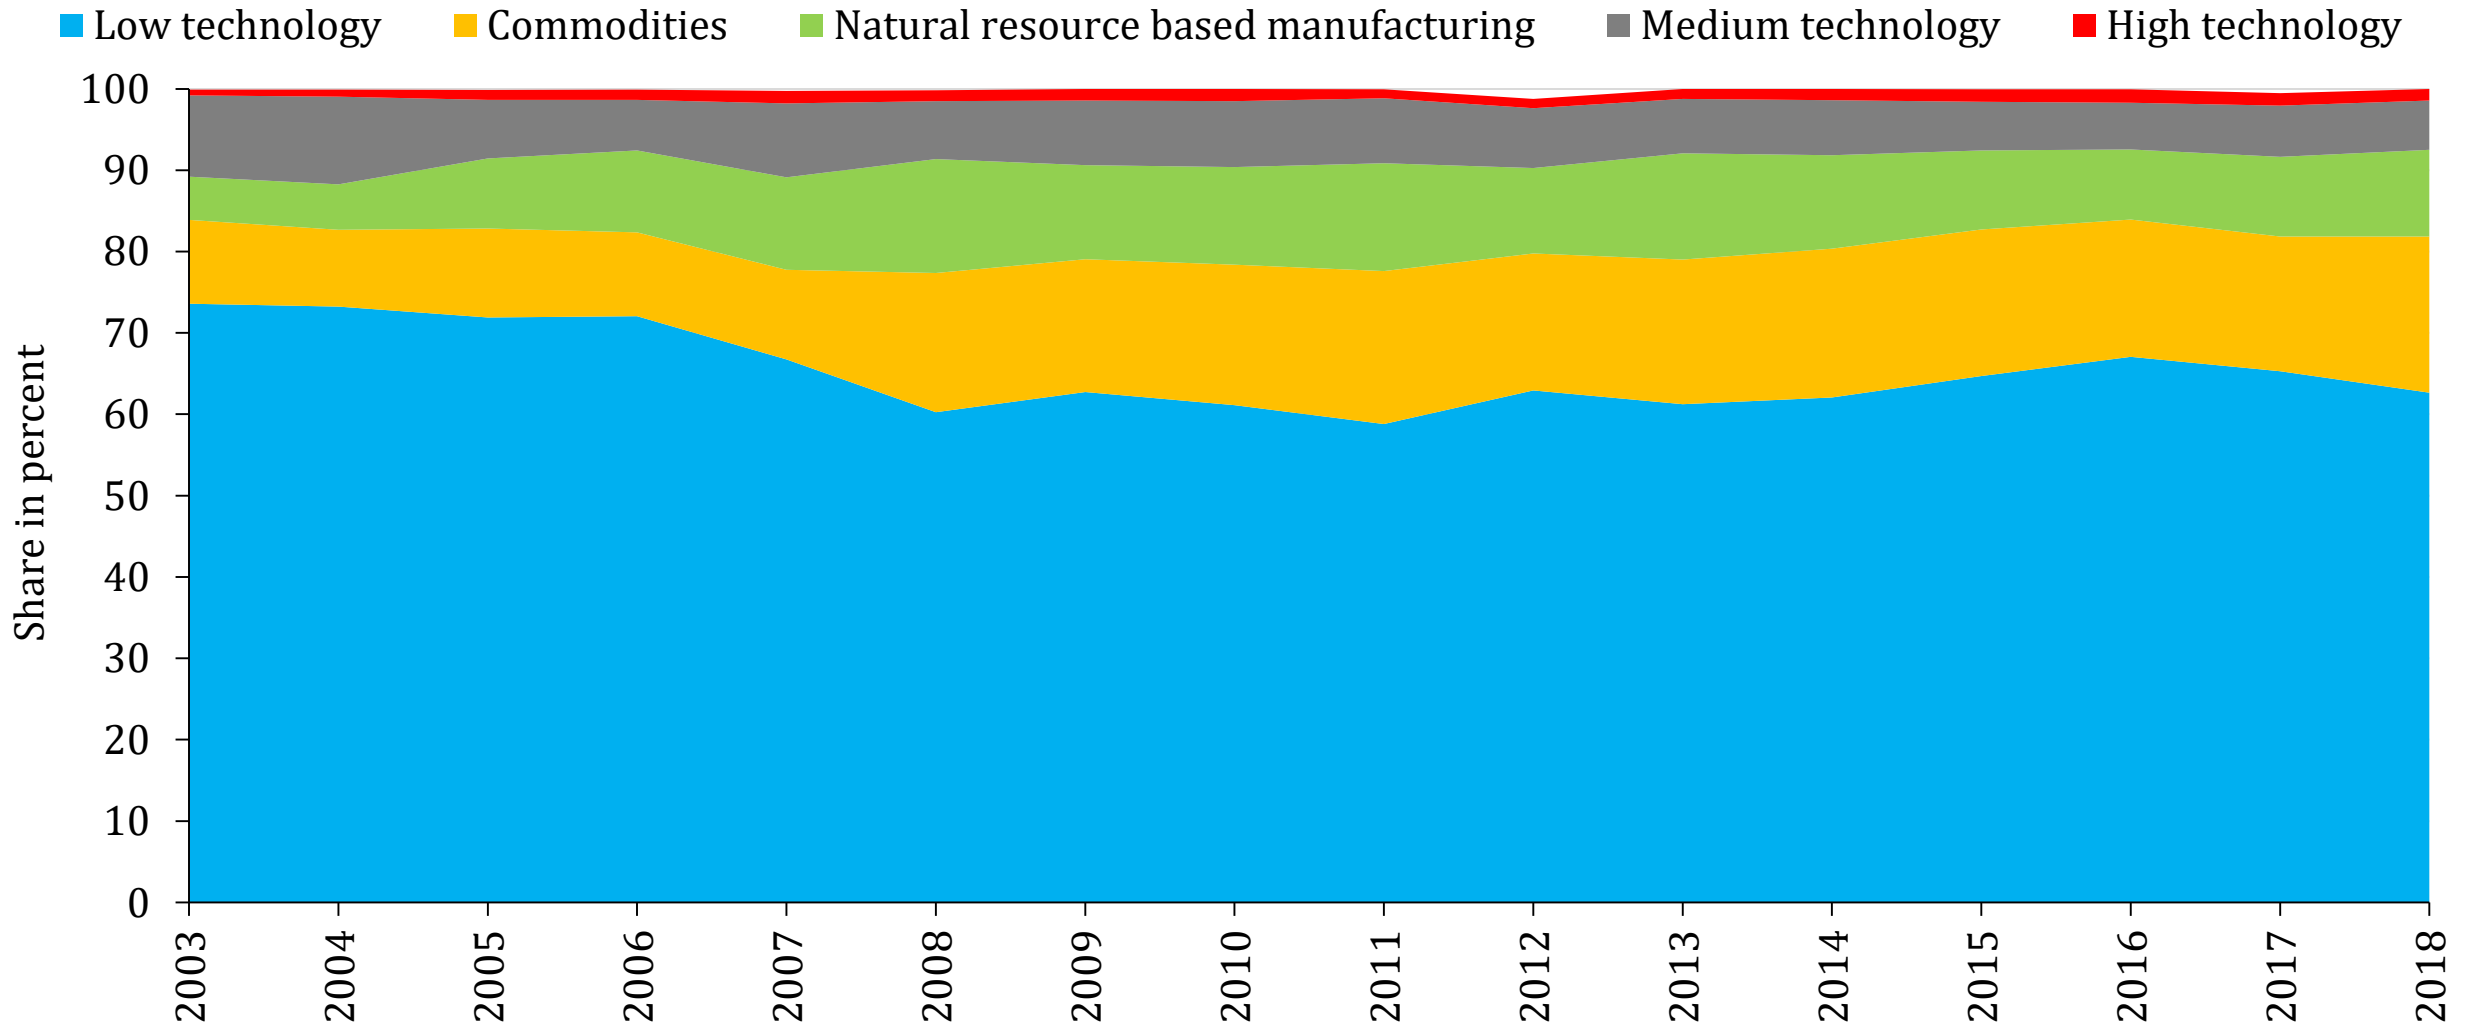

- ❖ We mapped Standard International Trade Classification (SITC) 3 digit codes with HS 6 digits spanning from 2003 to 2018 and categorized HS codes and added technological classification Sanjaya Lall, (2000) UN classification. Following the literature in international economics, revealed comparative advantage is used for assessing exports potential.

$$RCA = \frac{X_{Ai} / \sum_j X_{Aj}}{X_{Wi} / \sum_j X_{Wj}} \geq 1$$

- ❖ Based on RCA, we sorted the HS codes from highest comparative advantage to the least comparative advantage to identify the potential exports items from *supply side*.
- ❖ From the *demand side analysis*, we sorted HS codes based on world's fastest to slowest growing imports and then identified Pakistan's potential exports that matched with the world fast growing demand.

Technological Classification of Pakistan's Exports

Source: State Bank of Pakistan

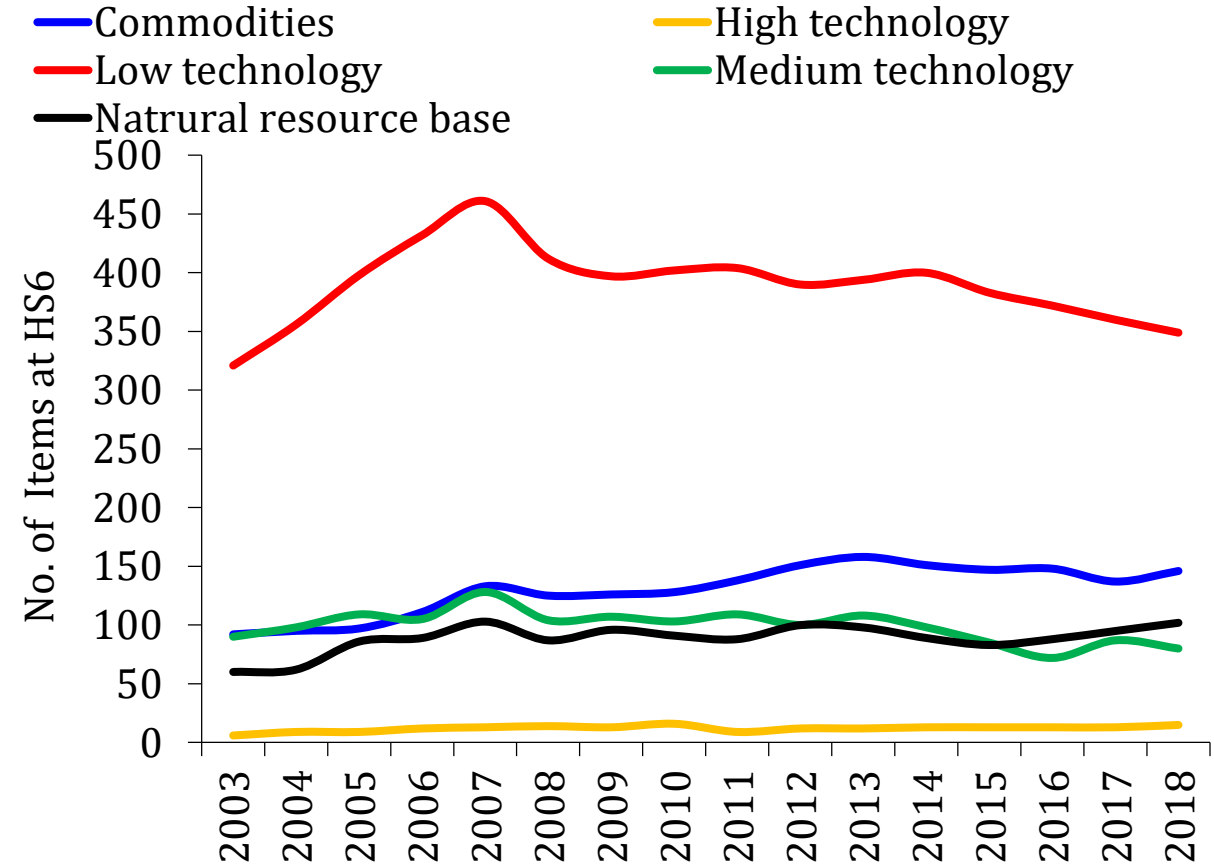

Pakistan is loosing its comparative advantage overtime

Total Exports: Items Count having comparative advantage (RCA >1)

Technological classification: Items Count having comparative advantage (RCA >1)

Source: State Bank of Pakistan

Potential Export Items from Supply Side

Comparative advantage revealed in low tech and commodities

Supply Side

Potential Export Items from Demand Side

World demand is rising faster for high and medium tech exports

Demand Side

High Tech, Medium Tech, Low Tech, Commodities, Natural Resource

Bubble size represents share in world trade

Conclusion

- With the given production structure, Pakistan has the potential to double its exports
- Most of this potential lies in labor intensive low tech products- good for employment

Thank You
